REASON FOR ALLOWANCE

The instant claims are directed to a supported catalyst composition and a polymerization process in the presence of such wherein the catalyst support is a polymeric support prepared by treating a porous crosslinked styrenic polymeric support with a halosulfonic acid, an optional organometal compound of Mg, Al or Zn, and an optional bulky amine.

Porous crosslinked styrenic polymeric particulates are conventionally used as the support in catalyst compositions and such is shown, e.g., in Krause et al. (US 5,498,582). However, Krause does not teach or reasonably suggest the treating the polymeric support with the halosulfonic acid. Kunz et al. (US 6,869,652) teaches treating a polymeric carrier with halosulfonic acid, however, Kunz's treated carrier is used a reactant rather than a catalyst support. Therefore, the cited prior art does not teach or reasonably suggest a supported catalyst composition containing the halosulfonic acid treated porous crosslinked styrenic polymeric support. Thus, the instant claims are deemed to be novel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
